Fabian Zimmer Focus group: JavaFX newcomer

Age: 26

Marital status: Single

Residence: Lucerne LU

Hobbies: Basketball, computer games, model aircrafts

Work: Developer, Techtron inc. Zurich
- 3 years of experience with Java
- This year, he got a frontend contract using JavaFX

Biography: After finishing his apprenticeship as a computer scientist, he decided to focus on system administration and backend development. JavaFX is a technology he has not used much. He has no flair for design and is not interested in it.

"Efficency leads to a comfortable workflow."

WORKAHOLIC   ADAPTIVE

CONCENTRATED

Self-evaluation

I have a high technological affinity.

I frequently use new smart phone applications and I like to try out something new.

I am not afraid to use new technology, even if it does not work immediately.

When problems occur, I search the internet for advice.

Goals

To get through the everyday workflow in a most efficient way possible without any disturbences.

To keep on track with new technology so that I'm always capable of doing a good job.

I'm looking forward to further education and therefore a promotion.

Motivation

Eager to learn new technologies. In doing so, he reaches his goals better and faster. It gives him the feeling to get something done.

The experiences he's made during the last years boosted his confidence. He's aware of the fact that a computer scientist should never stop learning.

However working in frontend is not his most liked field.

Annoyances

Long, tedious contracts. Unnecessary workflows which are not part of the primary acivity.

Design and front end work are not his strengths. If possible, he likes to work around it.

Debugging, searching for errors which are not obvious and cost much time and nerves.
